# Total [h] 177

date	time [h]	task
	2	Planning and writing project specification
15.3	4	Setting up the project. Checking how the external api works.
	1	Learning to use Chart.js.
16.3	1	Restructuring the project files to folders: frontend, backend and info.
	4	Refactoring. Saving players and teams from api to database.
17.3	3	Script to get all stats from api to database. Refactor the database models.
18.3	2	Brought all players from database to React state so it's possible to select which player's stats the user wants to see.
	1	Add searchable drop down list to select a player. Fetch data from api, not database yet.
19.3	2	First working version of season dropdown menu select for seasons. Still fetching data from api
	1	First simple working version to get data from the database
	2	Get stats for user from database with user input for player and seasons
	1	Add react-bootstrap and react-router-dom
	1	Change how the stats are shown
22.2	1	Refactor components
22.3	1	Add trailing averages to the stats
	1	Trying to add hide/show button to the chart but didn't get it to work yet
	1	Add minutes to chart
	1	Filter out documents where min = null in the query
23.3	2	Add possibility to select regular and postseason and get data accordingly from database
	1	Refactor regular/post season selection to its own component
		Add to the player stats page status of selected seasons and if they are regular or post
		Add styling to extend the style to the bottom of the screen
24.3	4	Add checkboxes to select which stats are not hidden on the graph
25.3	1	Chart responds to user selection of basic stats. Change chart colors
	1	Refactoring. Add options to the chart to make it responsive and disable legend toggle
	2	Backend doesn't filter queries by regular / post season. Change post
		/ regular season selection to button type
		Filter chart stats in frontend based on regular / post season selection
	1	Add all stats to the graph with checkbox functionality
26.3	1	Algorithm to count ft_pct correctly when fta = 0
	2	Add pct count algorithm for fg_pct and fg3_pct
	1	Trying to figure out how to implement two handle range slider but
		couldn't find an easy way to do it
	1	Database returns all seasons for a player
		Filter shown seasons in the frontend
	1	Hide chart legends and tweak the chart options to make it behave
		better
		Refactor stats selection and add colors to them
	1	Reposition buttons: Get stats, regular and post. Refactoring
29.3	1	Reposition stat selection checkboxes

Add players active years below his name so the user can see if those differ from his/her selection	د.د	1	Remove x-axis labels because they took too much screen space
Fix bug that showed years wrong. Add games amount during the selected time period  Add logo to landing page  Set logo setting so that it doesn't resize anymore  Fix problems with react-bootstrap  Finetune component locations on screen  Update React  Finetuning, removing warnings, getting ready for first Heroku deployment  Move backend to repository root so it can be deployed to Hero Refactoring, Remove button Get stats because it's not needed Remove unnecessary files  Add loading indicator when fetching data from database  Finetune the loading spinner logic  Finetune column sizes and loading spinner. Add instructions.  Scripts for ui build and full deployment  Set up domain bballchart.com in Namecheap. Configure Namecheap to point to Heroku DNS.  Refactoring. 'Automating' the data moving from api to database Install package colors and use it in the backend Make backend respond with a status message when moving da from api to database  First workflow for periodic checks  Add condition to data retrieving from api to avoid unnecessary requests  Fix bug in workflow  Change favicon.ico in the browser tab  Fix bug in workflow  Fix bug in trailing percentages counting  Fix bug when selected first season is greater than selected last season  Finetune the instructions  Change the first season from 1980 to 1979  Add tips for a better user experience  Remove console.log when searching for player stats  Fix bug when periodic workflow tries to ping and trigger data if from api  Add Google tracking code to make Google Analytics work  Refactoring for implementing a new view for teams  Add select drop down menu for teams  Add select drop down menu for teams  Add endpoint for team stats and query them from database  Bug fix for team stats data to frontend for further usage			Add players active years below his name so the user can see if

Refactoring for implementing a new view for teams Add select drop down menu for teams  Add endpoint for team stats and query them from database  Bug fix for team stats data query  Bring team stats data to frontend for further usage		1	-
Add select drop down menu for teams  Add endpoint for team stats and query them from database  Bug fix for team stats data query  Bring team stats data to frontend for further usage	6.4		
Add endpoint for team stats and query them from database  Bug fix for team stats data query  Bring team stats data to frontend for further usage		3	
Bug fix for team stats data query Bring team stats data to frontend for further usage			
Bring team stats data to frontend for further usage			
The season selection for team state			
3 Add loading spinner for teams		3	
Calculate totals for each player of the basic stats		٥	
1 Add doughnut chart for team total points		1	
1 Add doughnut charts for all team total stats			
1 2100 doughilut Charts for an team total stats		1	2300 doughnut Charts for an team total stats
Fix bug that team stats query returned documents where min is			Fix bug that team stats query returned documents where min is no

		Fix bug when team selection always fetched data from season 2020
		Rearrange the doughnut chart more compactly
		Finetune doughnut charts positioning
	3	Add selection for regular or post season for doughnut charts
		Fix bug when doughnut chart showed minutes wrong in seasons in
		the 80s and 90s
7.4		Add per game calculations
		Add doughnut charts for per game stats
		Add selection for per game and total stats
	_	Add keywords and description into index.html
	1	Add logo to teams page
		Compare calculations to espn stats. Seems to be correctly
	3	calculated.
		Testing doughnut charts
	1	Make the operation more dynamic
	1	Clean up the logo
	2	Add google analytics to the react app
		Finetune react google analytics
		Use react google analytics with the tracking code as an
		environmental variable
	3	Remove navbar and use links on top of the page to navigate
		Change teams data query from api to database
		Fix bug where an undefined player in teamStats crashed the
		program
		Add selection for per 36 min stats
		Testing per 36 min stats using basketball-reference.com. Seems to be correct within a few decimals
8.4	2	Discard per36 calculation if minPer is too low and fix bug in data
0.4		query from api to database that missed some new data
		Add title and description of the website
	2	Finetune teams view and its loading spinner
		Finetune players view and its loading spinner
		Add route to index.html to make different paths work in the address
		bar
		Trying to get Heroku addresses to work
		Working solution to get different address bar paths to work in
		heroku
9.4		Descriptions for players and teams pages
	2	Fix bug in players page when post season games were 0
		Email the status of data query from api to database
	6	Add TopTwenty stats
10.4	1	Fix bug in player page season selection when selecting starting
		season didn't show correct data
		Player stats chart y-axis start at zero and color white
	2	Prepare for a new player comparison page
12.4	2	First version of compare players page
13.4	2	Finetune compare players page
	1	Finetune the compare players stats presentation
	2	Prototype for counting and moving stats summary data to database
		Trying to get summary data transfer to database to work, problem
	3	with id
		First working version of saving summary data to database

	2	Add more stats to summary data and move season 2019 summary
14.4		data to database
		Add season to summary data because it is needed in queries
	3	Add all stats to summary frontend
		Finetune filtering for pct stats in frontend
		Refactor and add % selection for summary stats
		Refactor SelectPerTotal.js
	3	Refactor SelectRegularPost.js
		Refactoring top20 data and options handling so it can be used
15.4		elsewhere also
		Refactoring, add selection for how many players are shown in
	3	barcharts
		Calculate summary data and save to database for seasons 1983-2020
		Refactor data queries in frontend to avoid unecessary queries
		Refactor Teams and change its chart type to Bar
	3	Refactor bar charts into its own component BarCharts
16.4		Refactor Teams to use component BarCharts
10.4		Update ongoing season summary data and a periodic workflow for
	2	it
		Change filtering in barChartData service to match them better with
		official NBA stats
		Try to fix error in summary data update workflow
		Make line breaks consistent in BarCharts
	3	Refactor common components to their own folder
19.4		Form to send feedback to the developer
		Indication that message has been sent
	2	Backend for receiving messages from users to developer's email
		Notification not to send an empty message
		Stop using workflow for summary data because Heroku runs out of
		memory  Change periodic stats data update workflow to run once a day to
	2	avoid getting data in the middle of a game
		Reposition radio buttons in top players page for better usability
		Reposition radio buttons in teams page for better usability
20.4		Change filter in pcts to attempts >=50
20.4		Rename barchart titles and bug fixes
	2	Add google analytics to Contact
		Sort teams in alphabetical order by city
		Disable workflow for summary data
		Script to get all stats from api to database. Refactor the database
		models.
21.4	3	Add fga, fgm, fg3a, fg3m, fta and ftm to barChartData
		Add fga, fgm ,fg3a, fg3m, fta and ftm to BarCharts, TopPlayers and
		Teams
		Remove unnecessary sorting when fetching data for top players and
		teams
		Fix bug that showed undefined data on bar charts
		Fix bug that showed player stats when min was " or '0'
	1	Round values in player stats to one decimal point
		Change data fetching from api to database workflow to happen
		daily at about 11:30
22.4	2	Bug fix when p36m sorting didn't work and chart showed data in
		wrong order Start using Navbar again
		otart using travoal again

	1 2	
	3	Finetune the page descriptions
		Refactor compare players to use common components
		Remove unnecessary comments and console logs
23.4		Removing unnecessary files and comments and console logs
	3	Refactor column widths to use values from styling folder
		Add gridlines on the bar chart y-axes
		Add gridlines on the line chart y-axes
		Finetune stats selection position in playercareer page
	2	Base for a new page percentiles
26.4	2	Sort alphabetically and remove duplicates from player selection
26.4		Prototype for percentiles page
	2	Developing percentileStats
	2	First working version for data structures to show percentiles
		First working version of percentile stats in chart form
27.4		Add percentages and more colors to percentiles
	2	Description for percentiles page
		Clean up of unnecessary console logs and warnings
		Percentile data structures and charts for all stats and pg, p36, total
		and %
28.4	4	Change the navbar hamburger color to light
		Set percentiles chart y-axis max value to a fixed 100
29.4	6	Draw project diagram
30.4		Testing player career page
		Testing teams page
		Return only stats starting from season 1983 because earlier seasons
		have incomplete stats
		Change player career starting season selection from 1979 to 1983
	4	Change compare players season selection from 1979 to 1983
		Sort players by last name for compare players player selection
		Change top players season selection minimum fron 1979 to 1983
		Change teams season selection minimum fron 1979 to 1983
		Change entire project style height: 1500vh to minHeight: 100vh so
		there's no empty space at the bottom
3.5	4	Testing
	1	Writing README and instructions
